environment, forests, land, wilderness, species, ecosystems? Is the value they bring directly dependent upon human needs and interests? How important are the interests of non-human animals? How high of a priority should the determination of the environmental impact of a project be in a competitive international economic market, or with the socio-economic progress of the developing economies of the world? In the face of these concerns, how much economic growth is still viable for the more economically developed countries? How much might socio-economic systems have to be changed, and in what direction? These are the types of questions that this course will consider. It will identify the various fundamental assumptions involved in the various stances taken on these questions, and it
